Persistent Personas

Day 1 - Session 5

# What We'll Cover

1. What Gems save and reuse
2. The Relentless Editor contract
3. Testing a Gem with varied drafts
4. Demo: selective Canvas editing
5. Lab 1.5: Building the Coach

Save the instructions for a recurring task

# What a Gem Contains

A useful Gem defines:

- Persona and role
- Recurring task
- Relevant context
- Response format
- Boundaries and missing-context behavior

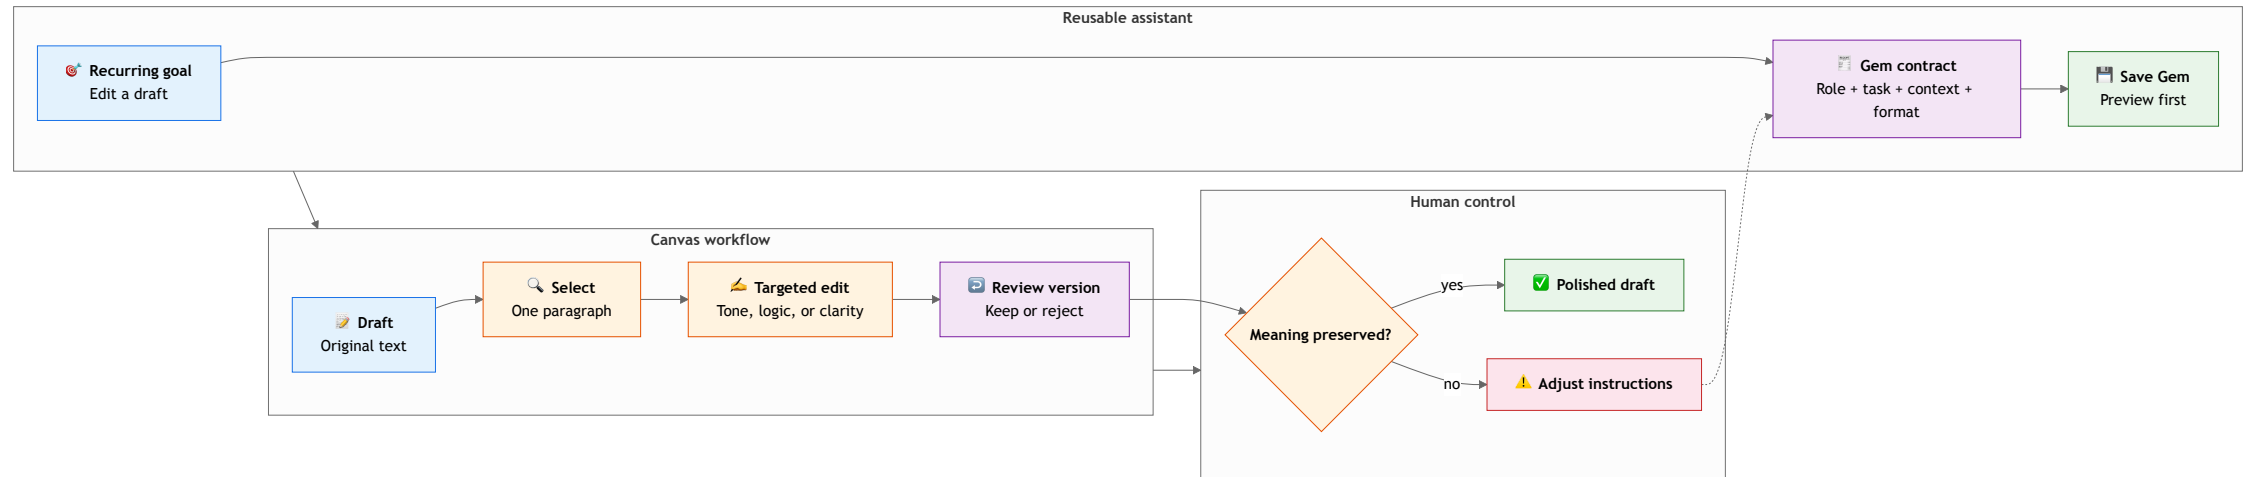

A Gem is an instruction contract, not an independent expert.

# The Relentless Editor

Identify clichés, logical gaps, unsupported claims, and questions a reader may ask. Ask direct questions instead of rewriting. Use a concise, no-nonsense tone. Preserve audience and meaning. Ask before judging when context is missing.

Preview with a draft before clicking Save.

# Gem and Canvas Refinement

# Persistent Persona Review (Fintech)

## REAL-WORLD SCENARIO

### Fintech (Intuit: QuickBooks + Mailchimp):

- Build a Gem that checks Mailchimp copy against a supplied QuickBooks customer segment or invoice context for clarity, unsupported claims, and missing approval.
- Refine one paragraph in Canvas without inventing financial facts; the QuickBooks–Mailchimp integration supports purchase and invoice history in contact profiles, but a writer approves the message.

# Persistent Persona Review (Retail)

## REAL-WORLD SCENARIO

### Retail (Wayfair: product catalog enrichment):

- Create a “catalog editor” Gem that asks for missing attributes, identifies ambiguous style or dimension claims, and proposes questions instead of silently rewriting.
- Test it on two prepared product descriptions, then review one Canvas edit against the source listing before publication.

# Test the Assistant

Use two drafts that expose different failure modes:

1. Cliché-heavy writing
2. A clear claim with a missing premise

Check whether the Gem follows its contract. Record one instruction change and the observed difference.

# Canvas: Edit One Selection

1. Move the draft into Canvas.
2. Select one paragraph.
3. Ask for a targeted change.
4. Compare the original and revised meaning.
5. Keep, reject, or revise the suggestion.

Saved versions help you experiment safely.

# Demo: Create the Gem

Run `day1/demos/09-relentless-editor-gem.md`.

- Preview the instructions with two drafts.
- Find one response that violates the contract.
- Save only after reviewing the behavior.

# Demo: Selective Canvas Edit

Run `day1/demos/10-canvas-selective-edit.md`.

- Select one paragraph.
- Remove a cliché without adding facts.
- Check that the intended claim and audience remain unchanged.

## Lab 1.5: Building the Coach

Open `day1/breakout-building-the-coach/` in the companion repo.

**Goal:** Create a reusable Gem and refine a draft in Canvas.

1. Define a recurring task and instruction contract.
2. Test the Gem with two drafts.
3. Refine one selected paragraph and review the version.

# Human Control

Before using the output externally, check:

- Meaning and evidence are preserved.
- The tone fits the audience.
- The Gem did not invent a correction.
- Sensitive information was not included.
- The writer approves the final version.

# Key Takeaways

1. Gems save instructions for repeatable work.
2. A good Gem specifies role, task, context, format, and boundaries.
3. Testing with varied drafts exposes weak instructions.
4. Canvas supports selective refinement, but the writer owns the final meaning.
